

Prof. Agnes (A^2) Azzolino
www.mathnstuff.com/math/math.htm

Hello,

This is your quiz. All I need handed in is the sketch of question # 20.

This first page is instructions.

The 2nd and 3rd pages are notes on the graphing of functions.

Basic or "Parent" functions are the first 8 functions found at:

<http://www.mathnstuff.com/math/spoken/here/2class/300/fx/300fxGraphs/FXallWIDE.jpg>

The 2nd page explains how the expressions and the graphs are related, how the "children" or more complicated functions are generated from "parent" functions.

The 3rd page provides practice graphs and 4th the answers to page 3 problems.

The 5th page has the 1 question quiz..

Email a completed page 5 ONLY

Rename the file as ##.First.Last.Qnumber.

Attach it to an email by 11:59 pm this Friday night.

Mail the quiz to either green@mathnstuff.com or purple@mathnstuff.com.

Stay safe, a^2

Create "Children" Functions children1.giff ©2/17/2024A²

think $y = a f(bx-c) + d$

$a =$ dilates - stretches, shrinks, reflects about a horizontal line
 + think "slope"

1. $y = 2x$

2. $y = \frac{1}{2}x$

3. $y = 2|x|$

4. $y = -\sqrt{x}$

5. $y = -x^2$

$d =$ range change - if $d = 0$ no translation/shift in the vertical
 $d > 0$ shifted up
 $d < 0$ shifted down

6. $y = x^2 - 2$

7. $y = |x| + 1$

8. $y = \sqrt{x} + 2$

9. $y = \frac{1}{x} + 3$

$c =$ domain change - if $c = 0$ no translation/shift in the horizontal
 think "recenter" the function
 think solve $x - c = 0$ if $c = 0$ no shift
 $\frac{+c}{+c} \quad c > 0$ shift LEFT
 $x = c \quad c < 0$ shift RIGHT

vertex at $(9, 0)$
 $x - 4 = 0$
 $x = 4$

10. $y = (x - 4)^2$

think opposite to graph the shift

11. $y = \sqrt{x + 1}$

12. $y = |x - 3|$

13. $y = \frac{1}{x + 2}$

children 2. get

the impacts of b are difficult to see

- b • stretch horizontally, speeds up/slowdown $f(x)$, changes period
- b • reflects about a vertical line

14. $y = \sqrt{-x}$  $-x \geq 0$
 $x \leq 0$
 $b = -1$, flip is over a vertical line $x=0$

where $b > 0$
 $b > 1$ faster
 $b = 1$ no change
 $b < 1$ slower

where $b < 0$
 $b > -1$ faster & flipped
 $b = -1$ no speed change but reflected
 $b < -1$ slower & flipped

$b = 2$ faster growth
 $b = 1$ normal growth
 $b = .6$ slower growth
 $b = -1$ vertical flip decay, not growth

cycle happens half as fast
 period = 4π
 $\text{period} = \frac{2\pi}{\frac{1}{2}} = 4\pi$

cycle is twice as fast.
 period = $\frac{2\pi}{2} = \pi$

$b = -1$
 $t(x)$ is a reflected about a vertical line but this is hidden because the functions are odd.

Sketch

children 3. gcf

© 1/7/2024 A²

think of more than 1 influence

$$16. y = (x-4)^2 + 2$$

$$17. y = -\sqrt{x+4}$$

$$18. y = \frac{1}{x-1} + 2$$

$$19. y = -|x+2| + 3$$

See answers before taking the quiz.

ANSWERS

children 4. gcf

© 2/7/2024 A²

think of more than 1 influence

Sketch *horizontal shift* *vertical shift*

16. $y = (x - 4) + 2$

$$\begin{array}{r} x - 4 = 0 \\ + 4 + 4 \\ \hline x = 4 \end{array}$$

18. $y = \frac{1}{x - 1} + 2$

$$\begin{array}{r} x - 1 = 0 \\ x = 1 \end{array}$$

reflect about horiz. line

17. $y = -\sqrt{x + 4}$

reflect about horiz. line

19. $y = -|x + 2| + 3$

$$\begin{array}{r} x + 2 = 0 \\ x = -2 \end{array}$$

1 question sketch as a quiz.

• Sketch # 20

20.

$$y = -\sqrt{-4+x}$$

• screenshot/take a picture
w/camera
draw in a document
create a file

• rename file as
